LAWNS :: GOLF COURSES :: SPORTS GROUNDS

For Those Who Demand the Best

T.T.S.

MAKING THE LAWN

A well kept lawn instantly commands the attention of all lovers of the beautiful in Nature and is an unfailing mark of intelligence and taste. The best soil is a good garden loam of medium texture: the surface should be thoroughly pulverized and smoothed to the desired grade. Remove all large stones, roots and hardened pieces of earth that cannot be readily broken, ample time being allowed for the thorough settling of the soil, which is greatly aided by a few heavy showers of rain. The surface should be from 2 to 5 inches in thickness on a subsoil somewhat porous but of character to retain and return to the top soil by capillarity enough moisture to supply the grass roots during periods between rains. Impervious clay subsoils can be improved by admixture of some porous material as granulated peat moss and prepared humus.

The high grade lawn grasses will maintain their own in competition with weeds if supplied with sufficient plant food. Vigoro is an ideal plant food to use. See Fertilizers.

When the soil is firm, level and suitably moist, sow lawn seed at the rate of 6 to 8 pounds to each 1000 square feet, or about 250 pounds to the acre. This rate of seeding has been advised by the U. S. Golf Association Green Section. It is unwise to be too economical in the quantity of seed used if the best results are desired. The seed should be sown broadcast and as evenly as possible, then give a thorough rolling. The seed must be well firmed in the soil.

Crabgrass, the worst lawn pest, is an annual starting in late Spring and often "taking" the lawn in a showery Summer as it spreads rapidly by root stocks and runners. It should be weeded out by hand in early stages as it is almost impossible to control after becoming established. Crabgrass reseeds itself and though it dies out at the first freeze the seeds are in the ground to germinate the following year.

A new lawn should be seeded in the early Fall if possible and six weeks growth before Winter, with proper fertilization, assures a comparatively weedless lawn; or seed can be sown early in the Spring and if well fed with Vigoro the grass will thrive and compete strongly with weeds. Persistent weeds such as Crabgrass and Chickweed should be weeded by hand. Always keep a little lawn seed to sow where weeds have been pulled.

Superficial sprinkling is worse than none. Give the lawn a thorough soaking every week during dry periods so that the water penetrates and is absorbed by the subsoil. Let your slogan be: "Crowd out the weeds with lawn grass."

General Surface Renovating—When your lawn has been established, you will find it to your advantage to lightly reseed each season. As early as possible, carefully rake off all dead leaves, etc., and give the lawn a dressing of Vigoro at the rate of at least 40 pounds to 1000 square feet, and rake in, after which sow our lawn seed at the rate of 3 to 4 pounds to 1000 square feet; roll thoroughly or tamp with the back of a spade.

Renovating in Spots or Patches—In the best kept lawns unsightly spots devoid of grass will appear, which are caused by impoverished soil, root-destroying insects or fungous disease; and as these spots are not protected by a covering of turf during the Winter, the chemical elements in the soil are leached out by the action of the weather, causing them to "cake" or become hard early in the Spring. It is useless and a waste of seed to sow these spots unless they are prepared to receive the seed. For this purpose cover them with Vigoro at the rate of 4 pounds to 100 square feet, then dig these spots up, and after raking until no trace of the fertilizer can be seen, sow our lawn seed at the rate of 2 pounds to each 250 square feet; roll thoroughly or tamp with the back of a spade.

TRIVETT'S BENT FORMULAS

For Those Who Demand the Best

Sow these *Bent Formulas* at the rate of 150 lbs. per acre, about 4 lbs. for 1000 square feet; this is less than required for regular lawn mixtures

Trivett's Bent Formula Grass Mixture No. 1 (With South German Bent)

Formerly sold by us under the name of "*Trivett's Velvet Bent Formula*," this mixture is one of our best sellers and is especially offered to those seeking a lawn mixture superior to the average good lawn grass mixture.

It contains 25 per cent *South German Bent* and will supply your lawn with such valuable varieties as *Velvet Bent*, *Colonial Bent*, *Rhode Island Bent*, *Creeping Bent*, etc., which are derived from the *South German Bent*.

Combined with several other high grade grasses, we believe no better lawn grass mixture can be offered for general purposes.

100 lbs. \$75.00	50 lbs. \$38.00	25 lbs. \$19.50
12½ lbs. \$10.00	5 lbs. \$4.25	Lb. 90c.

Delivery prepaid anywhere in U. S. A.

Trivett's Bent Formula Grass Mixture No. 2 (With Prince Edward Island Bent)

A special mixture of fine domestic and imported grasses, with which we have included 20 per cent of *Prince Edward Island Bent*, this is an ideal variety for fine lawns, because it requires less cutting, less watering and less feeding than other Bents. It grows upright and spreads by underground root stocks; is extra hardy, withstanding the most severe Winters.

Prince Edward Island Bent forms an ideal turf of dark green color. Uniform in texture, and almost immune to small brown patch.

The ideal, high grade mixture for New England.

100 lbs. \$80.00	50 lbs. \$41.00	25 lbs. \$21.00
12½ lbs. \$11.00	5 lbs. \$4.50	Lb. 95c.

Delivery prepaid anywhere in U. S. A.

Trivett's Bent Formula Grass Mixture No. 3 (With Coos County Creeping Bent)

An extra choice mixture of high grade, fine-leaved lawn grasses with which we have combined 20 per cent of *Coos Creeping Bent* (*Sea-Side Bent*). A true, stoloniferous or creeping Bent, spreading rapidly by means of stolons or runners. Produces ideal green carpetlike turf. Requires watering and frequent cutting.

Coos Bent seems to be resistant to large brown patch and is better adapted to warm, humid conditions than other strains. For smaller areas where an exceptionally fine piece of turf is desired, our No. 3 Mixture will be found especially suitable.

100 lbs. \$85.00	50 lbs. \$43.00	25 lbs. \$22.00
12½ lbs. \$12.00	5 lbs. \$5.00	Lb. \$1.10

Delivery prepaid anywhere in U. S. A.

Trivett's Bent Formula Grass Mixture No. 4 (With South German Bent, Prince Edward Island Bent, Coos Bent and Rhode Island Bent)

For very special places where a very choice turf, composed principally of the high grade Bent Grasses is desired.

This mixture, in addition to the finest of domestic and imported lawn grasses, contains 10 per cent each of the above mentioned four Bent varieties, 40 per cent in all, when it is considered that these choice sorts contain upwards of five million seeds to the pound, it will be readily understood that the quantity of seed required for sowing a given area will be much less than with regular mixtures (about half).

Sow 3 to 4 lbs. on 1000 square feet, mixed with sand.

100 lbs. \$95.00	50 lbs. \$48.00	25 lbs. \$25.00
12½ lbs. \$13.00	5 lbs. \$5.50	Lb. \$1.25

Delivery prepaid anywhere in U. S. A.

NOTE—All Bent Grasses will respond generously in growth and richness of color when fed with an acid producing fertilizer or one high in nitrogen

TRIVETT'S "SUNNY-GREEN" LAWN SEED

Our Special Mixture of Choice Lawn Grass Seed for Open Sunny Lawns, Produces Healthy, Bright Green Turf, Withstands Direct Sunlight

Including Choice German Bent, Highest Quality Chewings Fescue, Superfine Red Top, First Quality Kentucky Bluegrass, etc. No Clover.

NOTE—We do not offer grass seed by the measured bushel, some low priced mixtures weight only 12 or 14 lbs. per bushel, thus indicating a large proportion of chaff. Purchase by weight and be assured of full value.

For a good sowing, use 200 to 250 lbs. per acre—5 to 6 lbs. for 1000 square feet (100 feet x 10 feet)

TRIVETT'S GREEN-VELVET MIXTURE (WITH BENT)

For open sunny places. Light or heavy soil.

We use in this mixture only the highest grades of *Fine Leaved Fescue, Re-cleaned Kentucky Blue Grass, New Zealand Fescue, Fancy Red Top*, etc. and just the right proportion of *Choice Mixed Bents*.

No coarse leaved sorts and no clover.

A quality mixture at a moderate price.

GRASS SEED MIXTURES FOR VARIOUS PURPOSES

for Seashore, Tennis Courts, Polo Fields and Terraces

TRIVETT'S SEA-SHORE-SOD

A wonderful grass seed mixture for establishing permanent, healthy green lawns at the seashore and on land of a light, sandy nature. The varieties in this mixture are those Nature provides for such localities, cultivated for commercial purposes. Use 200 to 250 lbs. per acre, 5 or 6 lbs. per 1000 square feet for a good sowing.

25 lbs. \$13.00

12½ lbs. \$7.00

POLO FIELD MIXTURE

Especially composed with a view to producing a turf of uniform, hard wearing qualities that will quickly recuperate after hard usage; a special mixture of grasses of good quality and highest purity.

For a good sowing use at the rate of 200 lbs. per acre when making new seeding, and 100 lbs. for renovating.

500 lbs. \$150.00

100 lbs. \$35.00

25 lbs. \$9.00

TERRACE TURF MIXTURE

The terrace mixture which we offer is composed of deep rooting grasses which, if once established, will hold the soil and prevent washing, and we advise liberal fertilizing and seeding so that the grasses may be quickly established.

100 lbs. \$45.00

25 lbs. \$11.50

12½ lbs. \$6.00

LANDING-FIELD MIXTURE FOR AVIATION FIELDS

A special mixture composed of deep rooting grasses forming dense, yet smooth turf, which will withstand hard, rough wear and heavy weight.

In this mixture we use grasses which, in our opinion, are best suited to thrive with the least amount of water or care. The color effect is a light, bright green. For a good sowing, use 200 to 250 lbs. per acre for new seeding and 100 lbs. for renovating old turf.

A mixture of red, hard, fine-leaved, various-leaved, and tall Fescues. Excellent for mounds, bunkers, and exposed sandy situations in the "Rough."

100 lbs. \$45.00

25 lbs. \$11.50

SPECIAL "ROUGH" FORMULA

Consists of the taller growing hardy perennial grasses in combination with Yarrow and other plants suitable for the purpose, and least likely to give serious trouble as weeds, should their seed be carried by the wind and other agencies onto the greens or fairways.

100 lbs. \$30.00

25 lbs. \$8.00

BENT FORMULA—for PUTTING GREEN

A Bent formula mixture with a good percentage of Bent Grasses, containing *Velvet Bent*, *Creeping Bent*, etc. Highly recommended for seeding new putting greens.

100 lbs. \$75.00

50 lbs. \$38.00

25 lbs. \$19.50

Quantity of Seed Required—Use about 75 lbs. of mixed seed for each green of average size, 25 lbs. will be sufficient when reseeding worn or thinned out turf.

FAIRWAY MIXTURE

Our special mixture for fairways, is, we believe, the best that is possible to compose for general normal conditions and we feel confident will produce excellent results. However, as soil and other conditions must be given due consideration, we will be pleased to submit special formula for any particular condition.

500 lbs. \$200.00

100 lbs. \$45.00

Quantity of Seed Required—Sow from 200 to 250 lbs. of mixed seeds to the acre—that is, for seeding new areas. To renew thin fairways, from 50 to 100 lbs. per acre are usually sown.

WORM ERADICATOR (Liquid)

Follow directions as given with each shipment. The worms will rise quickly to the surface and there die.

\$3.00 per gal. in barrel lots.

PASTURE GRASS, TIMOTHY, CLOVER—See page 9

TRIVETT'S FINE BENT GRASSES

Should not be sown too heavily, about half
the usual quantity of other grasses

FOR OTHER SEPARATE NAMED GRASSES—

See page 8

The great popularity of golf has brought the *Fine Bent Grasses* into prominence through their almost universal use on putting greens in the northern half of the country.

The *Bent Grasses* are native to acid soils but will thrive over a wide range of soils though naturally favoring those toward the acid side. Where soils are chiefly alkaline, a fertilizer high in nitrogen, and preferably with an acid reaction, is a great advantage in maintaining good bent turf. Recent experiments have shown that Vigoro fertilizer is capable of maintaining bent turf in the very finest condition. Golf clubs use sulphate of ammonia, which has an acid reaction and is high in nitrogen, but is not a complete fertilizer and may burn the grass if used carelessly.

These *Bent Grasses*, particularly *Prince Edward Island Bent*, are not temperamental and will stand a lot of hard usage if given reasonable care and good fertilizer. A new Bent lawn should have at least 3 inches of fine top soil over a well drained subsoil. Fertilizer should be applied at the rate of 25 lbs. to 1000 square feet at least a week before seeding. *Bent Seed* should be mixed with fine sand or commercial humus (5 parts of sand to 1 part of seed) for even distribution. If sown too thickly it may damp off.

Most turf weeds are discouraged by acid-reacting fertilizers and their continued use not only encourages *Bent Grass* but makes the weed problem much simpler, and will help greatly to eliminate Summer grass or Crab grass.

The *Bent Grasses* are inexpensive when the amount sown to the square foot is taken into consideration. There are about 5,000,000 seeds to the pound.

For new seeding sow about 3 lbs. (mixed with 1 peck of sand) to 1000 square feet. For old lawns or reseeding, 1 to 2 lbs. will be sufficient.

For Spring seeding, we advise 10 per cent *Italian* or *Domestic Rye Grass* as a nurse crop on lawns only. The *Rye Grass* dies out in a year's time. Fertilize two or three times during the season at the rate of 25 lbs. to 1000 square feet and see that the fertilizer is watered into the soil and does not stay on the grass.

CERTIFIED PRINCE EDWARD ISLAND BENT SEED

(*Agrostis tenuis* in Canada—*capillaris* or *vulgaris* in the United States)

Average purity 90 to 95 per cent. An extra hardy strain of *Colonial Bent* grown on Prince Edward Island under very severe Winter conditions. Certified and sealed in 50-lb. bags by the Canadian Department of Agriculture. Smaller quantities resealed by us. Grows upright and spreads by underground root stocks. Almost immune to small brown patch.

Prince Edward Island Bent is the ideal bent grass for lawns because it requires less cutting, less water, and less top dressing than the creeping varieties. It requires little attention except weeding.

100 lbs. \$155.00	50 lbs. \$80.00	10 lbs. \$17.50
5 lbs. \$9.50	1 lb. \$1.95	

CERTIFIED NEW BRUNSWICK CREEPING BENT

(*Agrostis stolonifera* var. *compacta*)

Seed production very limited. A new variety of true creeping Bent, spreading by stolons or runners. Finer in texture than *Seaside Bent* and most commercial strains.

The demand is expected to be much greater than the supply. Certified and sealed in 10-lb. bags by the Canadian Department of Agriculture. Similar to *Coos* or *Seaside Bent* in general habit of growth.

10 lbs. \$28.00	5 lbs. \$15.00	1 lb. \$3.25
-----------------	----------------	--------------

CERTIFIED VELVET BENT SEED

(*Agrostis canina*)

A very limited quantity of pure *Velvet Creeping Bent* is grown on Prince Edward Island and produces what is probably the finest turf known. Fields are inspected 90 per cent as to variety, but due to the aggressive character of *P. E. I. Bent* (*Agrostis tenuis*) the re-cleaned seed is approximately 90 per cent *Agrostis* species of which 60 per cent to 70 per cent is pure *Velvet Bent*. Prince Edward Island is the only source of supply other than the small quantities sometimes found in *German Mixed Bent*. About 10,000,000 seeds to the pound.

Certified and sealed in 10 lb. bags by the Canadian Department of Agriculture. Smaller quantities resealed by us. Lb. \$7.50

CERTIFIED COOS CREEPING BENT OR SEASIDE BENT SEED

(*Agrostis maritima*—sometimes *Agrostis stolonifera maritima* and *Agrostis palustris*)

Average purity 98 to 99 per cent. The very highest quality grown in Coos County, Oregon, and certified and sealed in 50-lb. bags by the Oregon Department of Agriculture. A true, stoloniferous or creeping Bent, spreading rapidly by means of stolons or runners. Makes ideal putting green turf.

On lawns, will spread more quickly than upright, non-creeping sorts but requires more water and frequent cutting. If neglected it will form a tangled surface growth. *Coos* or *Seaside Bent* is in great demand by golf clubs as it is much cheaper and more satisfactory than many vegetative strains.

100 lbs. \$135.00	50 lbs. \$68.00	10 lbs. \$14.00
5 lbs. \$7.50	1 lb. \$1.60	

Remember—The *Bent grasses* require slightly more attention and care than the common grasses on alkaline soils as they are growing under rather artificial conditions.

Prince Edward Island Bent is native to the drier places and *Coos Bent* to moist locations. Each thrives best as native conditions are approximated.

SOUTH GERMAN BENT

A natural mixture, chiefly *Colonial Bent*, containing sometimes a slight amount of *Creeping Bent* and a somewhat larger quantity of *Velvet Bent*. No two lots alike and often contains *Red Top*. Those desiring some *Velvet Bent* in their lawns and who do not object to a mixed surface of many strains can sow *German Bent* to advantage.

Superfine. 100 lbs. \$125.00	50 lbs. \$63.00	10 lbs. \$13.00
5 lbs. \$7.00	1 lb. \$1.50	
Re-cleaned. 100 lbs. \$105.00	50 lbs. \$53.00	10 lbs. \$10.75
5 lbs. \$6.00	1 lb. \$1.25	

RHODE ISLAND BENT OR COLONIAL BENT

New Zealand grown. Also known as *Colonial Bent* or *Browntop* (*Agrostis tenuis, capillaris* or *vulgaris*). Botanically the same as *Prince Edward Island Bent* but grown under mild Winter conditions. Not certified but usually high in purity. Definite characteristics as to hardiness and freedom from disease not fully established. We offer seed 98 to 99 per cent in purity.

100 lbs. \$125.00	50 lbs. \$63.00	10 lbs. \$13.00
5 lbs. \$7.00	1 lb. \$1.50

KENTUCKY BLUE GRASS

A very good natural grass with unlimited uses, either on lawns or meadows. It starts to grow early in Spring and when cool Fall weather arrives it will supply your lawn with that smooth green surface so much desired. It takes one year for Kentucky Blue Grass to become thoroughly established. Highly recommended for pasture and hay mixtures.

Superfine	4.25	10.00	39.00
Fancy	3.75	9.00	35.00

MEADOW FESCUE

One of the finest grasses for permanent pasture and hay fields. The fodder is of high quality and much desired by all stock. We recommend Meadow Fescue in sandy places, where finer natural grasses will not root deep enough to find nourishment.....

RED TOP FANCY

A variety very thoroughly recleaned and of great value in lawn mixtures. If your lawn has not the appearance you desire we would highly recommend a liberal sowing of Red Top Fancy, together with a suitable plant food or lawn dressing, such as we offer in other sections of this catalog. Red Top is used in meadow and hay mixtures as it greatly improves the quality of the product.

HAY AND PASTURE GRASS

Old English

FORMULA

The mixture that has made the pastures of old England famous, slightly changed to suit the climatic conditions of this country. Where a fair sprinkling of Clover is desired, we advise customer to purchase about 5 lbs. of medium Red Clover to each 100 lbs. of grass separately and broad cast after sowing the grass. This method will assure an even growth of Clover in the field whereas if the Clover seed is mixed with the grass seed, it will sift down to the bottom of bags.

For a good sowing, use 200 to 250 lbs. per acre.

OLD ENGLISH FORMULA No. 1 for light soil.

OLD ENGLISH FORMULA No. 2 for medium soil.

OLD ENGLISH FORMULA No. 3 for heavy soil.

Either of the above three mixtures:

100 lbs. \$35.00	50 lbs. \$18.00	25 lbs. \$9.50
------------------	-----------------	----------------

TIMOTHY HAY

Timothy grass produces the standard hay crop of this country, and, if mixed with Fancy Red Top and Clover the value will be greatly enhanced.

Sow about 25 lbs. of Timothy per acre.

PRIME XXX BRAND. High grade quality.

100 lbs. \$18.00	50 lbs. \$9.50	25 lbs. \$5.00
------------------	----------------	----------------

RECLEANED. This is the regular grade.

CLOVERS

MEDIUM RED CLOVER. This is the regular red variety and is the most popular sort for general purposes. It will produce two crops each year. The first crop is usually cut when in flower and used for hay, the second cutting can also be used for hay, or if plowed into the soil will provide excellent food for other crops.

Sow at the rate of about 20 lbs. per acre.

100 lbs. \$35.00	50 lbs. \$18.00	25 lbs. \$9.50	10 lbs. \$4.00
------------------	-----------------	----------------	----------------

MAMMOTH RED CLOVER. Larger, stronger growing and heavier cropper than the regular Red variety, although considered by some to be somewhat coarser and not of as fine quality.

Sow at the rate of about 20 lbs. per acre.

100 lbs. \$30.00	50 lbs. \$16.00	25 lbs. \$8.50	10 lbs. \$3.50
------------------	-----------------	----------------	----------------

ALSIKE (SWEDISH CLOVER). A very hardy sort that will succeed well on moist soil. It is of very fine quality, having a larger percentage of food properties than the Red variety. Excellent for sowing with "Timothy" or hay mixture.

Sow at the rate of about 20 lbs. per acre if alone, or 5 lbs. to every 25 lbs. of Timothy, or 5 lbs. to every 100 lbs. of grass mixture.

100 lbs. \$35.00	50 lbs. \$18.00	25 lbs. \$9.50	10 lbs. \$4.00
------------------	-----------------	----------------	----------------

SWEET CLOVER. An excellent sort for mixing with pasture seed, and as a soil builder cannot be excelled. It will grow on poor soil.

Sow at the rate of 15 lbs. per acre.

100 lbs. \$18.00	50 lbs. \$9.50	25 lbs. \$5.00	10 lbs. \$2.25
------------------	----------------	----------------	----------------

SCARLET or CRIMSON CLOVER. An annual Clover which matures earlier than any other and is used for feeding green or as hay. Owing to quick growth will supply a greater amount of foliage for turning under in Spring.

Sow at the rate of about 20 lbs. per acre.

100 lbs. \$20.00	50 lbs. \$10.50	25 lbs. \$5.50	10 lbs. \$2.25
------------------	-----------------	----------------	----------------

WHITE DWARF CLOVER. Very low growing sort, principally used in poor ground to give a green cover, many like it in lawns, especially where grass does not do well.

100 lbs. \$60.00	50 lbs. \$31.00	25 lbs. \$16.00	10 lbs. \$6.50

CHOICE IMPORTED STOCKS—TESTED AND GUARANTEED

Our entire offering of high class flower seeds is produced for us by specialists in many parts of the world, and are obtainable only direct from us in packets of oversize quantities, and sealed with our trade-mark.

FROM THE FLOWER GARDENS OF ENGLAND

For generations England has been famous for her flower gardens. It has been there, in England and Scotland, in the wonderful old country estates and public gardens that many of our most choice varieties have been created. It is to the old world gardeners with their patience, enthusiasm and love for their profession that we are indebted for the great advancement in, and perfection of, floriculture today

Notes on Raising Flower Seeds

ANNUALS (HARDY). Those families which are sown and bloom the first season, the plants dying with the approach of Winter, such as **Alyssum, Calliopsis, Candytuft, Centaurea, Mignonette, Nasturtium, Poppy, Sweet Peas, etc.** Sow from April to June, the later sowings being confined to rapid-growing annuals only. The ground should be previously prepared by digging, working in a little manure at the same time. The surface should be made level and finely raked. If the weather is dry, give a watering some hours before sowing. Sow thinly and gently press the seed into the earth, covering lightly with finely sifted soil; the very small seeds must have very little covering. Keep the soil moist and shaded until the seedlings are up; the shade can be managed with branches of evergreens or sheets of paper fastened to little stakes. When large enough to handle, thin out freely, leaving space for each plant to develop to its full size. Thinning out is best done during dull, moist weather, or in the evening time. In calculating the distance that should be left between plant and plant, it may be taken as a general rule that plants which attain, when fully grown, a height of 1 foot, require to be thinned out to at least $\frac{1}{2}$ foot apart, and so on.

Many of the hardy annuals may be sown in August and September, for Spring and early Summer flowering, and if the seedlings are boldly thinned out at an early stage they become hardy and robust, producing finer plants and a greater profusion of bloom than when sown in Spring.

Hardy Annuals do not, in most cases, transplant well; they should therefore be sown, where intended to bloom.

Half-hardy Annuals. Slower in growth than the Hardy Annuals. They include **Antirrhinum, Aster, Cosmos, Marigold, Salpiglossis, Salvia, Stocks, Verbena, Zinnia, etc.** May be sown in March or April, in gentle heat, in pans, shallow boxes, or pots, a light sandy soil being used. Shade from the sun's rays till seedlings are up; this can be done by simply placing a newspaper lightly over them. As soon as the seedlings are large enough to handle, prick off into

shallow boxes, and when strong enough and all danger of frost is over, plant out on to well-prepared ground.

Those who have no convenience for sowing in heat can sow all **Half-hardy Annuals** in the open border middle of May.

GREENHOUSE FLOWERS such as **Calceolaria, Cineraria, Cyclamen, Primula, etc.** Sow in gentle heat, in pans of loam, leaf soil and sand, in equal parts, placing a piece of glass over the pan and keeping shaded and moist until the seedlings are up; pot these off singly when large enough, and replace in heat, shading and keeping close until established, and pot on as necessary.

PERENNIALS. Those plants which do not usually blossom until the following year after sowing, but continue to flower and increase each year thereafter, many however, will flower the first season from seed if sown in February indoors, and planted out. Some popular perennials are **Aquilegia, Delphinium, Digitalis, Gaillardia, Hollyhock, etc.** Sow from March to July in pans or in drills on a prepared bed of light, rich soil and keep shaded and moist until the seedlings appear. Prick these out as soon as large enough to handle, into shallow boxes or nursery beds, and when strong enough transplant to permanent situations. Do not allow the seedlings to remain too long in the seed pans or to get starved for want of water.

Hardy Alpines. Seeds of Alpines, rock plants, and all hardy Primulaceae should be sown in pots or pans during early Winter, and after a good watering should be stood outdoors against a north hedge or wall where the soil can get frozen. Then when milder weather sets in, bring the pans into gentle warmth and the seeds will germinate freely. After March it is better to wait and sow the seed in Winter, giving the treatment as recommended above.

BIENNIALS require similar treatment to perennials. They include **Campanula, Pansy, Sweet-william, etc.** The plants die after the flowering season.

NOTE—In the case of very hard-shelled seeds it will be found a good plan to steep them in tepid water for some hours previous to sowing, as this will hasten their germination

SWEET PEAS and seeds which are liable to attack from mice should be steeped for half an hour in kerosene oil previous to sowing

TRIVETT'S SELECTED GREENHOUSE ANTIRRHINUMS

We Supply Originators' Seed Only

TREATED + SEEDS

On this page we offer a list of varieties which we have grouped under the heading of "Greenhouse Antirrhinums."

We have done this as a matter of convenience. They can be grown outside with as much success as any of the other sorts. The varieties offered on the following pages can also be grown under glass.

To those desiring very tall flower spikes for greenhouse, we can recommend our "Triumph and Tall Giant Strains" offered on the following page, in addition to those marked "Tall" on this page.

If medium height, bushy plants with many side stalks are preferred, we recommend the varieties marked Semi-tall on this page, also the Semi-tall Group on page 17.

All our Antirrhinum seeds are procured from the originators.

ASTER—W. R. American Branching Azure Blue

ASTER—Queen of the Market Pink

NEW WILT-RESISTANT STRAIN

Raiser's description

For several years we have been working on a strain of Asters resistant to the *Fusarium wilt disease*, which has caused so much trouble to both amateur and professional growers in recent years. The plants may be stricken with the wilt at any stage in their growth, from the seedling to the flowering stage, and as yet no method of control has been discovered. We believe prevention through highly wilt resistant strains is the only method of combating the disease.

SIX NEW WILT-RESISTANT VARIETIES

W. R. Mary Semple. American branching type. Flowers large, double and fine form. The color is lovely shell pink. About 2½ feet in height and late blooming.

W. R. American Branching Azure Blue. A nice shade of azure blue or dark lavender. Late blooming. 2½ feet.

W. R. Ostrich Feather Deep Rose. Midseason blooming; large, full, fluffy flowers. About 2½ feet high.

W. R. Crego Deep Rose. Midseason blooming. about 2 feet high. Large, improved Comet type.

W. R. Royal Azure Blue. Full, round, double flowers. Early flowering. About 2 feet high.

W. R. Heart of France. Rich dark red. 2 feet high. Midseason blooming. Flowers medium size.

Any of the above wilt resistant varieties:

¼ oz. \$1.50 ⅛ oz. 80c. Pkt. 25c.

NOTE—All types and varieties of Asters marked W. R. are wilt-resistant.

DAHLIA SEED

TRIVETT'S SELECTED LIST OF THE FINEST TYPES

It is now quite a universal practice to raise Dahlias from seed. Their culture is very simple. Treat similar to any half-hardy annual such as *Aster*, *Antirrhinum*, *Zinnia*, etc.

By sowing seed indoors in February-March, and potting up the seedlings, strong plants will be obtained for planting outside in May.

SINGLE DAHLIAS

Trivett's Stella. Also known as *Single Star*, *Starfish*, *Orchid-flowered*. We obtained this variety from France many years ago. The petals are rolled and pointed, forming a star and are marbled in different tints of colors. Like watered silk. . . . Pkt. 50c.

TRIVETT'S DELPHINIUMS (Continued)

GOLD MEDAL STRAIN — Seed grown for us in Scotland and England

Sow Seed in Spring

We strongly advise our customers to purchase and sow the seed in the Spring when a good germination may be expected. Summer sowing results in poor germination as the seed is then about one year old. New crop seed is not available until Spring.

Choice Named Hybrids

We cannot promise that these choice named hybrids will reproduce themselves entirely true from seed. About 50% may be expected. However, all the seedlings will be exceptionally fine, some making new breaks and producing charming colors.

Hints on Raising

Sow seed in fine soil in frame or boxes, cover lightly, not more than $\frac{1}{8}$ in., firm the soil and moisten, keep shaded and moist, when the seed breaks through remove shade and when the seedlings have formed round leaves prick off into flats.

DWARF AZALEA-FLOWERED

Double flowers in clusters. Height 1 foot.

As will be seen from our photograph herewith, the habit of the plant and the way the flowers are borne above the foliage makes it resemble, to a remarkable degree, the Azalea. The blooms, however, are much larger and produced in such abundance that the foliage is almost completely hidden when the plant is at its best. One can easily picture the extraordinary effect this plant would make if bedded en masse, planted in clumps in annual borders. As a pot plant it has a great future. Our *Dwarf Azalea-flowered Godetia* is of the easiest culture; prefers ordinary soil. Do not feed.

TALL DOUBLE GLADIOLUS-FLOWERED

Long, graceful, loose sprays. Height 2½ feet.

It would be difficult to offer our customers a more uncommon, beautiful and useful cut flower which is so easily raised from seed. Treat similar to hardy annuals, such as Cosmos, Zinnias, etc. Our tall Godetias remain in full beauty for a long period and when cut, the long, graceful sprays make a handsome decoration for vases. As a greenhouse cut flower, quick growing and easy to raise, it has few equals. Prefers ordinary soil.

Trivett's Tall Cherry Red. A beautiful, rich cherry red color; the exquisite double flowers are arranged in long, graceful sprays; invaluable for cutting. ... 5 pkts. \$2.00 Pkt. 50c.

PRIMULAS

ENGLISH GROWN—GREENHOUSE SAVED SEED

Grown for us by specialists.

Not recommended to the amateur grower unless in possession of greenhouse, conservatory or similar facilities. Successive sowings should be made from March to June, in shallow seed pans, in a compost consisting of two parts leafmold, one part loam, and one part sand. Cover the seed lightly and place in a temperature ranging from 50 to 60 degrees. Keep the seed almost dark. As soon as the seedlings appear, prick them off into boxes or pans in a compost similar to above. When the plants are large enough put into 3 in. pots, adding a little more loam to the compost; shift into larger pots later. All Primulas prefer a cool temperature.

TRIVETT'S STATICE (Sea-lavender)

Annual. For cutting and Winter decoration. For outdoor and greenhouse flowering.

All the Statice are useful as cut flowers and keep a long time after cutting. They are everlasting and can be dried for use as Winter decorations.

For outdoor flowering, seed should be started in boxes or frames (in February and March) similar to Asters, Zinnias, etc., and planted out when weather permits. For greenhouse culture (Statice grows to perfection in cool greenhouse), seed may be sown July and grown on in pots or the bench, coming into bloom just after Chrysanthemums are over. For March flowering inside, sow seed in September, and if large specimens of the Suworowi type are desired, make several shifts to larger pots to encourage development, finishing with 8 or 10 inch pots.

Note—Where the seed is furnished in clusters, they should be broken up before sowing.

Trivett's Suworowi Selected. *(Russian Statice.)* Flower spikes of bright rose, resembling the Butterflyflower. Splendid for greenhouse or outdoors. This variety is very prominent in the London flower shops. Sometimes called "Cathedral Flower." *(Illustrated.)*

SWEET-WILLIAM (Dianthus barbatus)

Biennial. Treat as perennial. For borders and cutting.

Seed should be sown in June in frames or open ground, and the young plants transplanted to their flowering position in September and October. Sweet-william supplies a wealth of color for the hardy border in Spring, also exceedingly useful for cutting.

Copper King. A fine shade of color, rich coppery red on stems 1½ feet in height. Single florets in large heads.

Newport Pink Improved. Soft salmon pink, in massive heads on stems 1½ to 2 feet in height. Excellent for cutting.

Trivett's Scarlet Beauty. Single bright red, very attractive and showy in perennial borders.

Trivett's Snow Queen. Single, fine masses of bloom, snow white and good long stems.

Holborn Glory, or Giant Auricula Eyed. Very large flowered, in a splendid range of different colors, all showing a clear white eye or center ring. Height 1½ feet.

Trivett's Crimson King. Single dark red, a very rich velvety crimson; fine for contrast with the lighter colors.

Trivett's Black King. The darkest red of all, deep maroon red with reddish bronze foliage.

Sutton's Harlequin. Large heads of bloom, each head containing different shades of color intermixed with white. Odd and attractive.

Trivett's Single Mixed. All choice colors in mixture.

Price, any of the above nine:

Oz. \$3.00 ½ oz. \$1.75 ¼ oz. \$1.00 Pkt. 25c.

Trivett's Purple King. *New!* Brilliant deep purple color so far unknown among Sweet-williams; single florets in good, large heads. Splendid for flower border and cutting. ... Pkt. 50c.

Sutton's Giant White. Enormous trusses of very large flowers. ... Pkt. 75c.

Sutton's Pink Beauty. Beautiful salmon pink variety. Choice. ... Pkt. 75c.

TRIVETT'S DOUBLE. Very massive heads of bloom. Only about 50 per cent double flowers.

TREATED + SEED

RAISER'S DESCRIPTIONS IN ALL INSTANCES

Advance (Bolton). Rich salmon tint, suffused with soft shrimp pink over a cream ground; the color deepens towards the edges of the petals. Four and five large bold blooms are perfectly placed on strong stems.

Pkt. (12 seeds) 50c.

Anglo (Burpee). *Award of Merit*, National Sweet Pea Society of Great Britain. In bud a rich yellow opening to a subdued yellow, with a beautiful edging of pink. The large, lovely flowers are always duplexed and waved and are carried on fine stems.

Pkt. (20 seeds) 35c.

Atlantic (Burpee). *Award of Merit*, National Sweet Pea Society of Great Britain. There is a warm softness to this variety that is appealing. Geranium pink is suffused with amber, and a new effect is given by the lace-like netting of cherry bloom pink; beautiful under artificial light.

Pkt. (20 seeds) 35c.

Dainty (Sutton). Best described as a white, heavily flushed with pale pink. The blooms are large and daintily poised on very long stems. A strong grower, equally valuable for exhibition or garden use.

Pkt. (15 seeds) 50c.

Dandy (Bolton). Almond blossom pink is at its best in this lovely variety; a satiny sheen over the flower gives the color a warmth and radiance; stems are long and wiry, blooms well placed.

Pkt. (12 seeds) 50c.

Ecstasy (F-M). This variety arouses enthusiastic comment on account of its most appealing and charming blush pink shade. It has all the good qualities of "*Pinkie*," very robust grower. Flowers very large, bold, nicely waved and well placed.

Pkt. (30 seeds) 50c.

Electra (Unwin). Rosy mauve overlaid with electric blue shading; quite distinct from any other variety and will be found a good garden or exhibition variety; vigorous, healthy grower, long, stout stems.

Pkt. (12 seeds) 50c.

Flaming Torch (Sutton). A brilliant variety; in color a flaming orange scarlet overlaid with a beautiful flush of copper. A vigorous grower, blooms of large size and extremely free flowering. Quite sunproof.

Pkt. (15 seeds) 50c.

Gigantic (Bolton). Awarded the "*Abol*" 75 Guinea Challenge Trophy for the greatest advancement since the War, in any one species, tribe or strain of plants. *Gold Medal*, S. N. S. P. S. *Award of Merit*, *Leicester*. Conspicuous for large size of bloom, strength and vigor of plant. A white of wonderful purity and substance. Five blooms are average while sevens and even eights are not uncommon. Delightfully fragrant.

Pkt. (12 seeds) 60c.

Gladys Improved (King). *Award of Merit*, N. S. P. S. and R. H. S. York, Chelsea and Holland. One of the best lavenders for garden or show purposes. This variety will produce freely 5 and 6, 7 and even 8 flowers on a stem, all open at one time.

Pkt. (15 seeds) 50c.

Grand National (King). N. S. P. S. and R. H. S. F. C. C. Dutch, N. S. P. S. Brussels, F. C. C. and *Silver Medal*, Aalsmeer. The best cream Sweet Pea yet introduced. In the bud it is really yellow and opens a deep rich cream; large frilly flowers, many are duplex; strong, stout stems.

Pkt. (15 seeds) 50c.

Mahogany (Sutton). A much sought for color in Sweet Peas and aptly described by its name. Although a dark variety, the brilliant copper sheen with which the flower is overlaid gives it a bright appearance. Blooms very large and sunproof.

Pkt. (15 seeds) 50c.

Mastercream (F-M). A large, vigorous growing, long stemmed, black seeded cream. The flowers are mostly duplexed, beautifully frilled, of great size and depth of color.

Pkt. (30 seeds) 50c.

Mystic (Dobbie). This is quite a distinct lavender, having a white base to the standard. The flowers are beautifully frilled and are well placed on long, stout stems. It is a most robust grower.

Pkt. (12 seeds) 50c.

Pink Magnolia (Dobbie). *Do not confuse with "Magnolia."* Soft salmon pink. The dainty coloring of this delightful and charming Pea has only to be seen to be appreciated. There is a suggestion of a silvery sheen over the pink. The flowers are very large.

Pkt. (12 seeds) 50c.

Queen of the Belgians (King). F. C. C. National Sweet Pea Society of Brussels. An outstanding rich orange scarlet, a dazzling color which at once attracts attention. By special permission, Her Majesty, the Queen of Belgium graciously allowed it to be named after her.

Pkt. (15 seeds) 50c.

Radiant (Dobbie). This outstanding Pea is of rich deep salmon rose. The flowers are frilled and fluted to a remarkable extent. It is a vigorous grower and produces stems of great length; will take a prominent place on the exhibition table.

Pkt. (12 seeds) 50c.

The Colonel (Stark.) *First-class Certificate*, Scottish Trials. Enormous flowers of brilliant orange scarlet "sunproof." The blooms are perfectly placed on stout stems and should make a wonderful bunch on the exhibition table.

Pkt. (12 seeds) 50c.

4 to 5 feet. Oz. \$3.00 ¼ oz. 85c. Pkt. 25c.

VENIDIUM

Fastuosum. A magnificent new species from the Cape. The plants attain a height of 2 to 3 feet, and above the grayish silky foliage rise numerous rich orange colored Daisylike flowers which are marked with a purple black zone at the base of the petals. The flowers average 4 to 5 inches across and make a most striking display in the border. This variety is best treated as a half hardy annual, sowing the seed in April or early May, as germination is difficult if started earlier. The plants deserve the most sunny position in the garden. Also suitable for greenhouse culture. *(Illustrated).* . . . Pkt. 50c.

Calendulaceum. A strong growing hardy annual, with large, brilliant orange colored flowers which have a paler zone round the central dark disc. Gives a succession of bloom the whole Summer and Autumn. Height 18 inches. Pkt. 25c.

TRIVETT'S SELECTED DAHLIA-FLOWERED ZINNIAS

NOTE—We offer "THE GOLD MEDAL STRAIN." These are extra selected, the seed is hand picked from the earliest and best flowers.

Zinnias are very popular annuals for cutting, bedding and garden display and may be had in bloom during Summer and into Autumn until killed by frost.

The Dahlia Flowered Type is the largest of all, next in order of size comes Trivett's Mammoth, Tall Giant Double, Dwarf Large Flowered, Lilliput and finishing with Baby Zinnias.

ZINNIA DAHLIA - FLOWERED

TREATED ⊕ SEED

THE LARGEST OF ALL

Growing 2½ to 3 feet high and producing enormous flowers in many beautiful colors.

Canary Bird. Delicate shade of soft primrose yellow; very large.

Crimson Monarch. The largest and best of all red shades, flowers often measure 8 inches in diameter.

Dream. Fine, deep lavender, turning to Mallow purple; very desirable shade.

Exquisite. The most charming color of all; soft light rose with deep rose in center.

Golden Dawn. A shade of yellow between *Golden State* and *Canary Bird*. They are of enormous size and of perfect type.

Golden State. Rich orange yellow (cadmium yellow) in the bud, turning to orange when in bloom.

Illumination. A gorgeous, deep rose self color; a very charming shade.

Lemon Beauty. Decidedly a pastel shade and next in size to *Crimson Monarch*; golden yellow over brown.

Luminosa. Several tones darker than *Exquisite*. Bright deep pink with a light suffusion of salmon.

Meteor. Rich glowing deep red, the darkest red. Fine form, very large and more floriferous than other reds.

Old Gold. Glowing burnished deep and lighter shades of old gold. Very large, well formed flowers.

Old Rose. A real old rose shade, very large. For charm and beauty it ranks next to *Exquisite*.

Oriole. We consider this the most beautiful of its class. It is an immense orange and gold bicolor.

Polar Bear. True Dahlia form, the largest White Zinnia.

Purple Prince. Fine, deep purple, large and well formed.

TRIVETT'S MAJUS BELL

LILY-OF-THE-VALLEY

For Indoor Forcing

THE FINEST GRADES PROCURABLE

We offer the most choice grades of pips for forcing; they are especially imported and produce extra large pure white bells on strong stems almost 15 inches in length, having a distinct and delightful fragrance.

COLD STORAGE PIPS

Majus Bell, Exhibition. 3-year-old pips. The largest and most choice grade of this excellent large bell type, these highly developed pips produce strong, straight spikes covered with unusually large, snow-white bells which are of delicate, refined fragrance and accompanied by the healthy, green foliage so much desired.

PACKED IN CASES AS FOLLOWS:

1000 \$67.00	500 \$34.00	250 \$17.25
--------------	-------------	-------------

Majus Bell, Standard. The most popular grade for general purposes, only slightly smaller than above.

1000 \$63.00	500 \$32.00	250 \$16.50
--------------	-------------	-------------

Majus Bell, Florists'. A splendid grade for general use where quantity is desired at low cost.

1000 \$59.00	500 \$30.00	250 \$15.75
--------------	-------------	-------------

NEW CROP PIPS

These arrive in November *but are not suitable for forcing at that time.* They should be retarded in cold storage or other cold place by purchaser for at least three months before planting for forcing. Splendid for outdoor planting.

PRICES: 10% less than quoted for "Cold Storage Pips" for each grade.

LILY-OF-THE-VALLEY—"Majus Bell" Exhibition

Greatly improved sort, producing large, pure white bells on long strong stems, the finest grade of Lily-of-the-valley procurable

LILY-OF-THE-VALLEY FOR OUTDOORS

Henryi. Large, open, spreading flowers of rich, deep orange yellow. One of the finest and most satisfactory of Garden Lilies. Splendid for planting among Rhododendrons, small trees, shrubs, etc. Prefers well drained, deep soil, partial shade, and some shelter from high winds. A strong, vigorous grower which seldom fails to give satisfaction. Stem rooting. Plant 10 inches deep. For shipment and planting during Fall and Spring. Blooms July-August. Height 5 to 6 feet the first year, and may reach 10 feet high, with 25 or more flowers when established.

Extra Selected—Heaviest bulbs.

Humboldti magnificum. Drooping flowers in loose clusters of brilliant golden yellow spotted with purple. Requires a deep, well drained soil. Base rooting. Plant bulbs on their sides. 5 inches deep. Blooms June-July. Height 5 feet.

Extra Selected—Heaviest bulbs.

100 \$75.00 25 \$19.00 Doz. \$9.75

Japonicum krameri. A pink Lily of great beauty. True Easter Lily shaped or trumpet flower. Not so robust or as easy to grow as many of the garden Lilies, but so beautiful and rare that the extra trouble will be more than repaid. They prefer a situation between low growing evergreens, Azaleas, Kalmias, etc. Stem rooting. Plant 8 inches deep. For shipment and planting during Fall and Spring. Blooms June-July. Height 3 to 4 feet.

Extra Selected—Heaviest bulbs.

100 \$55.00 25 \$14.50 Doz. \$7.50

LILIUM HENRYI

Platyphyllum. See *Auratum*.

Pomponicum. A brilliant red Turkecap Lily. Will succeed under general garden cultivation. Does not object to sunlight or lime soil. Base rooting. Plant 5 inches deep. For shipment and planting during Fall and Spring. Blooms June. Height 3 to 4 feet.

Extra Selected—Heaviest bulbs.

100 \$95.00 25 \$24.00 Doz. \$12.75

Pyrenaicum aureum. "Yellow Turkecap Lily." Of easy cultivation, with many small, greenish yellow flowers, with brown spots and red anthers. Base rooting. Plant 5 inches deep. Blooms in June. Height 2 to 3 feet.

Extra Selected—Heaviest bulbs.

100 \$75.00 25 \$19.00 Doz. \$9.75

Regale (Myriophyllum). True Lily type flower (similar to Easter Lily). "The Regale or Royal Lily." One of our most beautiful Lilies, perfectly hardy, vigorous in growth, and will do well almost anywhere, thriving best in leafy loam soil and in the sunlight. Trumpet shaped flowers, white, washed with gold inside; the outside is shaded and streaked with brown blending off to pink; deliciously fragrant in the evening. Plant in groups in the herbaceous border, between shrubs, etc. Stem rooting. Plant 8 inches deep. For shipment and planting during Fall and Spring. Blooms July. Height 3 to 5 feet. For cold storage *Lilium regale*, see page 105.

Rubellum. A lovely rose pink shading to light pink; a beautiful little Lily of dwarf habit. Should be planted in gravelly soil, under the shade and protection of shrubs, etc. Also suitable for rock gardens. Stem rooting. Plant 6 inches deep. Blooms June. Height 1½ feet.

Extra Selected—Heaviest bulbs.

100 \$45.00 25 \$11.50 Doz. \$6.00

Sargentiae. Long, funnel shaped flowers, the inside is creamy white with a golden yellow throat; the outside is washed with brownish pink, not unlike *L. regale* in general appearance and as it flowers 2 or 3 weeks later, is a fine variety for succession. Vigorous grower, delightfully fragrant; succeeds in any good garden soil. Stem rooting. Plant 9 inches deep. Blooms July-August. Height 3 to 5 feet.

Extra Selected—Heaviest bulbs.

100 \$75.00 25 \$19.00 Doz. \$10.00

Speciosum album. Large, open flower with rolled back petals and boldly protruding stamens, and bronzy yellow anthers. The color is pure snow white tinted with green and gold towards the base of petals. A true hardy garden Lily. Will succeed almost anywhere. Stem rooting. Plant 8 inches deep. Blooms August-September. Height 3 to 4 feet.

TRIVETT'S TESTED AND GUARANTEED VEGETABLE SEEDS

UP-TO-DATE, PEDIGREE VEGETABLES ARE HIGHEST IN FOOD VALUE

IMPROVED VARIETIES

The importance of selecting improved and better varieties of vegetables cannot be over-emphasized. It is well-known that older sorts "run out," lose much of their merit, become more susceptible to diseases and insect attacks than up-to-date, improved varieties.

It pays to select new and improved strains.

TESTED AND GUARANTEED

Our seeds are tested for purity and germinating power and are guaranteed (*See page 1*). Our varieties are tested for vigorous growth, superior table quality, cropping ability and suitability for satisfactory culture in this country. Truly "*Best by Test*" standard.

It pays to secure tested and guaranteed seeds

COST OF SEED

The difference in cost of tested and guaranteed seed grown by specialists and the ordinary stock is merely nominal. The outlay for seed is the smallest part of gardening operations; selection, the most important. It costs just as much to grow ordinary stocks as it does for improved and selected strains.

It pays to pay for the best

Food Values and Medicinal Properties of Vegetables and Fruits

PREPARED BY AN EXPERIENCED AMERICAN NATUROPATH

FIRST FOOD VALUE GROUP

The following constitutes the first and most important group, having the highest food value, and in the order named.

Lettuce, Spinach, Swiss Chard, Melons, Pumpkins, Vegetable Marrow, Squash, Celery, Cabbage, Kale, Brussels Sprouts, Carrots, Leeks, Endive, Corn, and All Fruits and Nuts.

Note—The above observations are approximate. All the above are splendid foods, the superiority in some cases being very slight.

TRIVETT'S BOUNTIFUL SELECTED

One pound of Beans is equal to about one pint, and will sow a row 50 feet long

Make drills about 2 inches deep and 2 to 2½ feet apart, sow seed 1 or 2 inches apart and cover. As the young plants grow, draw a little soil against them on both sides as a support, repeating from time to time as the plants develop. Pods should be picked for the table when about 4 inches long. Sowings may be made every 2 weeks up to August 10th.

TRIVETT'S BROCCOLI

Brocoli (Ital.) Sparkelkohl (Ger.)
Broccoli (Fr.)

Trivett's Emerald Isle.

Improved green headed variety that, owing to earliness and rapid growth, is one of the few that will "head up" in this country, producing heads like Cauliflower, but grass green in color, retaining this color after cooking. After the large main head has been cut, the plant will produce a number of smaller heads which should be bunched together for cooking. A good proportion of stem should be cut with the heads, these cook soft and are very similar to Asparagus. Cook, prepare and serve like Cauliflower. Delicious flavor, a combination of Asparagus and Cauliflower.

Oz. \$5.50 ½ oz. \$3.00
¼ oz. \$1.75 Pkt. 50c.

Green Italian Sprouting. Produces many small heads of green color and delicious Cauliflowerlike flavor.

Oz. 75c. ½ oz. 40c. Pkt. 15c.

T.T.S.

BROCCOLI—Trivett's Emerald Isle

BRUSSELS SPROUTS

Berza de Brussels (Ital.) Rosekohl (Ger.) Chou de Bruxelles (Fr.)

Trivett's Exhibition. Produces abundance of large, solid well-shaped sprouts. Unequaled for exhibition and table use.

Oz. \$1.00 ½ oz. 55c. ¼ oz. 30c. Pkt. 20c.

Trivett's Table Dainty. For those who appreciate small, fine sprouts; dwarf growing and the earliest.

Oz. \$1.25 ½ oz. 65c. ¼ oz. 35c. Pkt. 25c.

Long Island Improved. Half dwarf. An American variety well suited to our climate, and extensively grown for the New York market. Very robust grower.

Oz. 75c. ½ oz. 40c. ¼ oz. 25c. Pkt. 15c.

Sow seed of Brussels Sprouts about 15th of May, thin out young seedlings, and when 3 inches high, plant out in garden in rows 3 feet apart and 2 feet between the plants. When heads begin to form, break off leaves from plant, commencing with the lower ones, and following up the stem as the Sprouts develop. Brussels Sprouts are of very late maturing habit, the flavor is much improved by slight frosts. Some gardeners find it advisable to sow earlier than above date, for their particular locality.

How to Grow Broccoli—The type we offer above is, in our opinion, the only sort worth while attempting to grow in this country. Most of the varieties popular in Europe do not do well here. "Trivett's Emerald Isle" is such a rapid grower that the seed may be sown at different times and several crops secured. However, those which come in during July and August are somewhat inferior, being inclined to bolt or break into flower and seed. For real quality and production, it is best to treat like Cauliflower, that is secure an early crop in frames from a February sowing and a late crop outdoors (September and October) from a June sowing.

MUSHROOMS

Ten bricks will spawn 100 square feet (10x10 feet)

Mushroom beds may be made in a warm, dry cellar, or in any building where the frost does not penetrate and in the open air during the Summer and Fall months. About two or three weeks before the beds are to be made collect a quantity of fresh horse manure without the straw; place it in a heap under cover, and as it heats keep turning it over once or twice a week, until the heat has become exhausted, which will require from 10 to 14 days' time. When the manure is in a condition to be made up lay out your bed, according to your requirements, say 3 feet wide, 10 feet long and from 2 to 3 feet deep; beat it down well with the back of the spade as the process of building goes on. When the bed has been made some time, say a week or thereabouts, and the heat sufficiently declined to a temperature of 65 or 75 degrees, the spawn may be put into it. Break the spawn in pieces 2 inches square, and put them 6 inches apart, all over the bed; then cover the bed with 2 inches of rich soil. When the soil looks dry give a gentle watering with tepid water, using a rose on the watering pot. Good crops of Mushrooms can be obtained by spawning the hotbeds in Spring.

Brick Spawn, American Pure Culture

Ten bricks will spawn 100 square feet (10x10 feet)

Spores have been selected from specimen Mushrooms and transferred to bricks of compressed manure and loam. Break the brick into pieces the size of a walnut and plant 6 inches apart each way.

Brick 35c. 10 bricks \$3.25 25 bricks \$7.00 100 bricks \$25.00

Bottle Spawn, A New Process

One quart will spawn 35 square feet

In this new method the spores are propagated in sterile glass bottles, the spawn removed, dried, and packed in cartons. Excluded from the Spawn are the spores of other fungous growths, many of which are highly poisonous; no insect eggs, flies, or weed seeds. Pieces the size of a nut are planted in the usual way. Produces white Mushrooms. As this spawn is perishable, orders are filled direct from factory.

DON'T STICK TO THE OLD VARIETIES OF VEGETABLES—MANY OF THEM "RUN OUT"
GROW THE NEW AND IMPROVED SORTS

TRIVETT'S NEW GARDEN PEAS

OLD VARIETIES "RUN OUT" — KEEP UP-TO-DATE — GROW THE NEW SORTS

Standard varieties of vegetables reproducing themselves year after year through a long period of time, eventually "run out," exhaust themselves and become superseded by the newer and improved strains.

We are constantly on the watch for new and improved strains to offer our customers.

NEW EARLY PEAS

Aviator. Raised by Messrs. Laxton of England. Quite distinct and combines all the best qualities of two very popular sorts, viz., *Laxton's Superb* and *British Lion*. It is a blue, round-seeded sort, hardy and can be sown very early; it is a first early variety growing about 3½ feet high, produces handsome, long, well filled pods containing seven to ten peas of unsurpassed quality. Highly recommended (*English grown seed*).

4 qts. (8 lbs.) \$7.00 Qt. (2 lbs.) \$1.80
Pt. (1 lb.) 95c.

Trivett's Abundance. We have pleasure in offering our customers this grand new early Pea. A round, blue seed sort maturing at about the same time as *Gradus*, but producing about 25% more crop. Hardy, strong growing vines about 3 feet in height, covered with good sized pods, containing 7 to 8 green peas of superb sweet flavor. *Can be sown early.*

4 qts. (8 lbs.) \$5.00 Qt. (2 lbs.) \$1.35
Pt. (1 lb.) 75c.

Greenmantle. New and distinct Pea of the *Superb* type, but having intensely dark green foliage. Pods mostly in pairs, 3½ to 4 inches long, dark green, 7 to 8 large green peas in pods; of good flavor; a heavy cropper. Height about 2 feet.

4 qts. (8 lbs.) \$7.00 Qt. (2 lbs.) \$1.80
Pt. (1 lb.) 95c.

SECOND EARLY PEA

Sutton's Phenomenon. This splendid Pea is regarded by many as being one of the finest dwarf Peas ever introduced. The crop produced is quite prodigious and the pods are of extraordinary size, no other dwarf sort can surpass it in size of pod; 9 to 12 peas in a pod. The table quality is very choice. Height about 2 feet.

4 qts. (8 lbs.) \$7.00 Qt. (2 lbs.) \$1.80
Pt. (1 lb.) 95c.

NEW EARLY PEA—Aviator

NEW MAIN CROP PEAS

Trivett's Monster. A grand new sort; midseason, producing very large, rich, dark green pods which are filled with exceptionally large peas, blue green in color and of unsurpassed table quality. When cooked this sort will be found to contain the genuine rich sweet marrowfat flavor. The vines are of vigorous, healthy growth, reaching a height of about 5 feet. Being a wrinkled sort, it should not be sown too early. *Stock very limited.* ½ pt. pkts., each 95c.

Onward. One of the best of the recent introductions. Coming in just ahead of *Telephone*. It is immensely productive with its handsome dark green pods produced in great profusion on sturdy, healthy vines which grow about 2½ feet in height. The blunt-nosed pods hang in pairs and are very tightly packed with peas of delicious, sweet flavor. A distinct and excellent variety. *Highly recommended.*

- 7th—**Trivett's Alderman**.....about 11 weeks, 5 feet.
- 8th—**Trivett's Latest of All**.....about 12 weeks, 4½ ft.

Round-seeded sorts can be sown very early but wrinkled varieties are liable to rot if the ground is cold. The character of the season, nature of the soil, etc., affect the height and date of crops.

Soak seed in water for day or two before sowing. Sow wrinkled varieties thickly. One quart is sufficient for a 50-foot double row.

TRIVETT'S TESTED SEEDS—FOR THOSE WHO DEMAND THE BEST

RADISH (Grown for us in France)

Ravanelli (Ital.) Radies (Ger.) Radis](Fr.)

Trivett's Scarlet Ball. The color is rich glowing scarlet. Perfect, ball-shaped with practically no tap root and very small foliage. The flavor is unusually crisp and sweet. If required for forcing this sort will be found much superior to most of the older red varieties. The roots are remarkably quick in forming.

Lb. \$4.00 ¼ lb. \$1.25 Oz. 50c. Pkt. 20c.

Trivett's Sparkler. Round, red and white, uniform bulbs, quick growing, with very little leaf growth. The flesh is snowy-white, juicy, yet crisp, and of delicious, mild, sweet flavor.

Lb. \$3.00 ¼ lb. \$1.00 Oz. 35c. Pkt. 15c.

Trivett's Scarlet Globe. (*Special.*) Round, bright scarlet-carmine skin, splendid for forcing. When only four leaves are visible, the roots are ready for the table. Crisp, sweet flesh.

SORREL

Acetosa (Ital.) Sauerampfer (Ger.)

Used for salads, it has a pleasant acid flavor. Can also be used as a boiled vegetable. Seed should be sown in the open ground in rows 6 inches apart.

French Large Leaved. Best sort.

¼ lb. \$1.25 Oz. 40c. Pkt. 15c.

SPINACH

Spinaccio (Ital.) Spinat (Ger.) Epinard (Fr.)

One ounce will sow a 50 ft. row

The first sowing should be made as early as possible, March and later, in drills about 14 inches apart, covering the seed about 1 inch. If the seed is soaked in water for a day or two, they will germinate quickly. Sowings may also be made in August and September. Spinach demands a rich soil and plenty of moisture.

Trivett's King of Denmark. (Special Stock). A remarkable type, having long, upright, crinkled leaves; exceedingly prolific and early, better and a heavier cropper than Savoy-leaved. Stands long before running to seed.

Lb. \$1.50 ½ lb. 85c. ¼ lb. 50c. Oz. 20c.

Trivett's Savoy-leaved ("Blight Resistant"). (Special Stock). A splendid variety, longer standing in the Spring than "regular Savoy" by 10 days. Almost blight proof.

SMALL FRUITING SORTS

Red Plum	Red Pear
Yellow Plum	Yellow Pear
Red Cherry	Red Currant
Yellow Cherry	Peach

Trivett's Abundance. Enormous bunches of bright scarlet fruit, shaped like and about the size of a hen's egg. The quality is excellent. Each: Oz. 60c. ½ oz. 35c. Pkt. 15c.

GREENHOUSE SORTS

Trivett's Choice. Newest and most improved greenhouse forcing Tomato; robust growing plants producing at short intervals immense trusses of smooth, uniform, bright scarlet fruit of unsurpassed flavor. ... Pkt. 75c.

Sutton's Best of All. Well known English variety. (Sutton's Seed.) Pkt. 65c.

Sunrise (Carter's). Perhaps the most widely grown of all greenhouse sorts. Pkt. 35c.

Stirling Castle. Exceedingly popular sort, medium size, round, smooth fruit, bright red, excellent flavor and heavy cropper. Pkt. 25c.

Greenhouse Culture—Tomatoes are especially desirable when obtainable out of season. Fruit of good quality can be procured by growing on in pots and shifting to larger sizes when pot bound, finishing with 8- or 10-inch size, or they may be planted in the bench. A temperature of 60 deg. is about right. Pinch out all side growth, water thoroughly, but not too often.

TOMATO—Trivett's Discovery

NEW TOMATOES TREATED ⊕ SEED

Break o'Day. Excellent early variety developed by Dr. Fred. J. Pritchard of Dept. of Agriculture, Washington. Size and quality (disease resistant) same as Marglobe, and as early as Bonny Best. Oz. \$1.75 ½ oz. \$1.00 ¼ oz. 60c. Pkt. 35c.

Heterosis. The most prolific sort in existence. Will yield about 25% more than any other variety. The vigorous plants produce double clusters of 20 to 25 fruits together. The flavor is exceptionally fine and agreeable. This variety was created by the "Heterosis" method of hybridization; in other words, first generation seed. The seed we offer is crossed each year. If this is not done, a worthless mixture would be the result. (Originator's seed.) ... 5 pkts. \$2.25 Pkt. 50c.

Marglobe. New disease resistant, distinct variety which has proved its value under different conditions of soil and weather. Produces a maximum crop of large, well rounded, bright scarlet fruit; very solid flesh and excellent eating qualities. It is second early in maturing. Special Stock. Oz. \$1.00 ½ oz. 60c. ¼ oz. 35c. Pkt. 20c.

Pritchard. One of the best of the disease resistant varieties. Appropriately named for the late Dr. Pritchard. This choice sort produces scarlet fruits of good size and shape in great abundance, quality and flavor is excellent. ... Pkt. 25c.

TRIVETT'S SEED POTATOES

CHOICE SELECTED STOCK

Potatoes prefer a light rich soil; if stable manure is used, it should be applied the year before. The use of artificial fertilizer is strongly recommended, about $\frac{1}{2}$ ton per acre.

Open furrows about 3 feet apart and 6 inches deep, sprinkle fertilizer, then cover with 2 or 3 inches of soil; cut the Potatoes allowing 2 or 3 eyes to each piece, plant 15 or 18 inches apart and cover with remaining soil. Spray growing plants with Pyrox. Four sacks (11 bushels) when cut will plant an acre.

PACHYSANDRA TERMINALIS

(Pak-i-san-dra term-i-nal-is)

"Japanese Spurge." Invaluable evergreen ground cover plant, about 6 inches high; its foliage resembles our native Laurel, being deep rich green in the shade and light emerald green in sunny places. Absolutely hardy anywhere in the U. S. A. completely evergreen, disease free, insect free. Thrives equally in dense shade, partial shade, or in full sun.

Any kind of soil will do, forms thick mats by means of spreading roots. If quick coverage is desired place plants not more than 6 inches apart. Cover up those bare places where even grass cannot grow—under trees, shrubs, terraces. A beautiful green rug for all difficult places.

Wet or dry, warm or cold, shade or sun, anywhere, everywhere.

YELLOW ROOT

(Zanthorhiza apifolia)

Generally low, growing about 15 inches. Produces new supply of stems each Spring—not evergreen; foliage pinnate and artistically cut, a pleasant change from the usual foliage. Autumn color golden yellow. Splendid for banks, roadsides, wood edges, etc. Likes moist, shade places but will do well in dry, sunny positions.

HEDERA HELIX

(EVERGREEN ENGLISH IVY)

The well known English Ivy is obtainable from us in a number of types. Their uses are numerous—as a low trimmed hedge, outlining paths, covering stone walls, sundials, embankments, as a general ground cover in semi-shade or shade; in fact, almost all of the uses to which "*Pachysandra*" may be put *except full sunlight.*

As a ground cover we recommend the planting of small plants placed about 12 inches apart. They will cover the bare ground quicker and can be clipped better than larger plants. *Free from diseases and insect pests.*

Hedera Helix. The well-known large-leaved English Ivy. Strongly clinging evergreen.

The Ideal Evergreen Ground-cover—PACHYSANDRA TERMINALIS

TRAINED FRUIT TREES

GROWN FOR US BY A SPECIALIST

For Shipment and Planting during Fall

Espaliers or trained fruit trees have a charm and usefulness all their own. There is not a house or a garden where they would not contribute beauty and enhancement, becoming the favorite and pride of the owner. One cannot fail to admire the sturdy little trees with their lovely blossoms of white, pink or red, followed by fruits of a size and color unsurpassed.

Vertical Cordon—One straight stem, can be planted against wires as close together as 1 foot.

Horizontal Cordon—A main stem 8 to 24 inches high, which divides, sending one stem to the left and one to the right in a horizontal position, each being from 3 to 5 feet in length.

"U" Form—A very useful shape, can be used everywhere; fit nicely between windows; fine to cover leader pipes on corners, etc. One main stem about 18 inches high, which divides, sending up two stems straight into the air at a distance of 18 inches from each other, and from 5 to 10 feet high.

Double "U" Form—For Peaches and Nectarines only. A short stem about a foot high throws a branch to left and right, turning upward they then each divide and form two "U" shapes.

Four Armed Palmette Verrier—Similar to the double "U" but instead of two "U" shapes standing beside each other, the Palmette Verrier forms a narrow "U" inside a wide "U". Unsurpassed for covering walls of all sizes, for making fences, screens, pergolas, etc. Available in Apples, Pears, Cherries and Plums.

Six Armed Palmette Verrier. A short, sturdy trunk about 15 inches high, on top of which two straight branches form a "U", an arm to left and right each throw up a "U", forming a tree in the shape of three "U"s standing in a row. In Apples and Pears only.

Three Fold "U" Form—Similar to the six armed Palmette Verrier, except that instead of producing three "U" shapes in a row, the Three Fold "U" forms a wide "U" into which is fitted another "U" and finally a narrow one fits inside the second "U".

HIGHEST GRADE GERMAN PEAT MOSS (Granulated)

A most useful garden material, especially suitable for mixing with the soil in hotbeds, coldframes, flats and the open ground (but should not be overdone).

Retains moisture, keeps roots cool in Summer, and keeps down weeds, presenting an attractive appearance to the grounds.

Ideal for mulching or covering the soil around Dahlias and in Rose beds, preventing the roots from being "cooked" during Summer. Much of the recent Dahlia trouble attributed to this cooking of the roots during hot spells.

Splendid mulch for Azaleas, Rhododendrons, Evergreens, Roses, etc. during both Summer and Winter. *Its use is unlimited in the garden.*

PLANT TUBS

Much can be said in praise of the wood our tubs are made from, namely, "Heart Cypress," but briefly, it has proved to be decidedly superior to all other woods, not only in durability but in appearance. It does not need a coating as a filler, as the wood naturally contains a certain amount of oil. Consequently it does not warp, shrink or swell, and in general it is *the* wood for plant tubs.

The workmanship on these tubs is equally good. No tub goes from the shops that has not been thoroughly made, and made to last for years, and our tubs are serviceable for practically every situation.

If you need tubs, buy good ones, and they will last you for many years. Most tubs, of course, look alike when they are freshly painted, but it is only after using them that their value can be realized.
